Executive Summary

This report presents information on the number of customers switching supplier between January 2014 and June 2018 in the electricity and gas retail markets. The report covers customer gains, customer losses and the net switching rate for all suppliers with a market share of greater than 1% for domestic and business customer switches completed in a given month. All data presented in this report excludes new registrations as they do not involve a switch from one supplier to another.

- The average number of electricity monthly switches in 2017 was 26,154. The average number of electricity monthly switches for 2018 so far is 26,671. This represents a 2% increase.
- The average number of gas monthly switches in 2017 was 10,368. The average number of gas monthly switches in 2018 so far is 11,613. This represents a 12% increase.

This report is compiled from data received from the MRSO and GPRO. For information on the roles and responsibilities of the MRSO see [here](#) and for the GPRO see [here](#).

- From January 2017, the methodology for reporting on switching in Electricity changed, from reports from MRSO based on billing information to reports based on transaction data associated with the 105L market message¹. *(The time of this change has been highlighted in the Suppliers gains and loses tables)*
- This difference should be taken into account when comparing information before 2017 and the series break is marked on the tables in this report.

Public/ Customer Impact Statement

The purpose of this paper is to report the level of switching in both the electricity and gas retail markets. This data is used internally by the CRU in its ongoing retail market monitoring activities and should be of interest not only to electricity and gas customers and suppliers but also those considering entering the gas and electricity retail markets. This report complements the more detailed retail market reports published by the CRU; such as the CRU's quarterly and annual retail reports. This switching report is published on a monthly basis.

For further information on this report, please contact retaildata@CRU.ie

2.1 Completed Gas Switches per Month.....	11
2.2 Supplier's net switching position	11
2.3 Suppliers' Gains and Losses.....	13

1. Customer Switching in the Electricity Retail Markets

This section provides monthly data for the electricity retail markets. The report covers switching from January 2014 to June 2018 and includes;

- Total completed switches.
- Suppliers' net switching position (this shows whether or not a supplier is winning more customers than it is losing in a given month).
- The number of customers switching to each supplier.
- The number of customers moving away from each supplier.

The data includes all switches completed by domestic and business customers. The data excludes new registrations as these customers have not switched from one supplier to another. Note that the data also does not include customers who have moved to a different plan with the same supplier. Where data is presented per supplier, only suppliers with a 1% market share (on a consumption basis) or greater are presented – based on data from the most recent retail quarterly retail markets report.

1.1 Completed Electricity Switches per Month

Figure 1 details the total number of completed electricity switches in each month from January 2014 to June 2018.

Figure 1. The total number of electricity customer switches completed per month from January 2014 to June 2018.

Figure 1 shows that for 2018, the highest number of switches occurred in February with 28,898 switches overall. The average number of switches for 2017 was 26,154 while the average number of switches for 2018 so far is 26,671.

1.2 Supplier's Net Switching Position

Figures 2 and 3 present the net monthly switching positions per supplier. This net switching data considers the number of customers that have moved to and from each supplier and show a net position².

Figure 2 presents this data from January 2014 to June 2018 while Figure 3 presents the last 12 months of available data (June 2017 to June 2018).

² If a supplier has lost more customers than it has gained then their net position will be a loss of customers and a negative figure will be presented and *vice versa*.

Figure 2. The net switching position of each electricity supplier from January 2014 to June 2018, for domestic and business customers.

Figure 3. The net switching position of each electricity supplier from June 2017 to June 2018.

Energia, Bord Gáis Energy, PrePayPower, Pinergy and Panda Power gained customers in June 2018. Electric Ireland and SSE Airtricity lost customers in June 2018.

Between January and June 2018 there were also a number of switches within the 'others' category. These suppliers fall below the de minimus threshold and so are reported on separately.

	Electric Ireland	Energia	SSE Airtricity	Bord Gáis Energy	PrePayPower	Pinergy	Panda Power	Others
June-18	-3,658	182	-2,692	1,968	1,198	54	2,230	718

Net switching for suppliers, June 2018

1.3 Supplier's Gains and Losses

Table 1 presents the number of customer losses per electricity supplier per month. Table 2 presents the number of customers each electricity supplier has gained per month – recall that this data like all other data in this report does not include new registrations.

Table 1. Monthly customer losses by electricity supplier.

2 Customer Switching in the Gas Retail Markets

This section provides monthly data for the gas retail markets from January 2014 to June 2018 and includes:

- Total completed switches
- Suppliers' net switching position³
- The number of customers switching to each supplier
- The number of customers moving away from each supplier

The data includes all switches completed by domestic and business customers. The data excludes new registrations as these customers have not switched from one supplier to another. Note that the data also does not include customers who have moved to a different plan with the same supplier. Where data is presented per supplier, only suppliers with a 1% market share (on a consumption basis) or greater are presented.

³ Shows whether or not a supplier is winning more customers than it is losing in a given month

2.1 Completed Gas Switches per Month

Figure 4 details the total number of completed switches in each month from January 2014 to June 2018.

Figure 4. The total number of gas customer switches completed per month from January 2014 to June 2018.

The average number of gas switches per month between January 2010 and December 2017 was 9,055, with an average of 10,368 switches per month between January 2017 and December 2017.

The average number of switches in 2018 so far is 11,613. The highest rate of switching in 2018 was in February, with 12,288 switches, as shown in Figure 4.

2.2 Supplier's net switching position

Figures 5 and 6 present the net monthly switching positions per gas supplier. This net switching data considers the number of customers that have moved to and from each supplier and presents a net position⁴. Figure 5 presents this data from January 2014 to June 2018 while figure 6 presents the last 12 months of available data (June 2017 to June 2018).

⁴ If a supplier has lost more customers than it has gained then their net position will be a loss of customers and a negative figure will be presented and *vice versa*

Figure 5. The net switching position of each gas supplier from January 2014 to June 2018, for domestic and business customers.

Figure 6. The net switching position of each gas supplier from June 2017 to June 2018.

The net switching position for all suppliers for June 2018 is shown below.

	SSE Airtricity	Bord Gáis Energy	Electric Ireland	Energia	Flogas	PrePayPower	Panda Power	Others
June-18	-118	-1,463	-307	324	-917	1,121	1,060	300

Net switching for suppliers, June 2018

In June 2018 SSE Airtricity, Bord Gáis Energy, Electric Ireland and Flogas lost customers, while Energia, Prepay Power and Panda Power gained customers.

2.3 Suppliers' Gains and Losses

Table 3 presents the number of customer losses per gas supplier per month. Table 4 presents the number of customers each gas supplier has gained per month – recall that these data like all other data in this report do not include new registrations.

Table 3. Monthly customer losses by gas supplier.
